

Package ‘SGPdata’

July 2, 2014

Type Package

Title Exemplar data sets for SGP analyses

Version 8.0-0.0

Date 2014-1-20

Maintainer Damian W. Betebenner <dbetebenner@nciea.org>

Depends R (>= 2.12)

Suggests SGP (>= 1.1-0.0)

Description The package SGPdata contains three data sets utilized by the SGP Package as exemplars for users to set up their own data for SGP analyses.

SGPdata-package

Exemplar data sets for SGP analyses

Description

The package SGPdata contains three exemplar data sets utilized by the SGP Package for testing and examples.

Details

Package: SGPdata
Type: Package
Version: 8.0-0.0
Date: 2014-1-20
License: GPL-2
LazyLoad: Yes
LazyData: Yes

sgpData*Longitudinal Student Assessment Data*

Description

A dataset comprising a subset of five years of state assessment reading data suitable for student growth percentile and percentile growth projection/trajectory analyses. The dataset is used in examples provided in the documentation for the `studentGrowthPercentiles` and `studentGrowthProjections` functions, and serves as an exemplar for user construction of their own datasets for growth percentile analyses.

Usage

```
data(sgpData)
```

Format

A data frame of student level observations for five years on the following variables.

ID Student ID

GRADE_2009 Student Grade Tested 2009, possibly missing

GRADE_2010 Student Grade Tested 2010, possibly missing

GRADE_2011 Student Grade Tested 2011, possibly missing

GRADE_2012 Student Grade Tested 2012, possibly missing
GRADE_2013 Student Grade Tested 2013, possibly missing
SS_2009 Student Scale Score 2009, possibly missing
SS_2010 Student Scale Score 2010, possibly missing
SS_2011 Student Scale Score 2011, possibly missing
SS_2012 Student Scale Score 2012, possibly missing
SS_2013 Student Scale Score 2013, possibly missing

Note

All datasets used with `studentGrowthPercentiles` and `studentGrowthProjections` must be specifically formatted as *wide* format files. The first variable/column is the student ID variable. The next set of columns provide the grade of the student across all the years provided in the dataset (possibly missing). The last set of columns provide the scales scores of the student in the respective grades. Multi-year operational analyses benefit from putting data in long format. See `sgpData_LONG` and associated documentation for a comprehensive account.

sgpData_INSTRUCTOR_NUMBER

*Lookup table associating INSTRUCTOR_NUMBER with student ID
by YEAR and CONTENT_AREA*

Description

A lookup table comprising student IDs associated with INSTRUCTOR_NUMBER a subset of five years of state assessment reading and mathematics data suitable for student growth percentile and percentile growth projection/trajectory analyses. The dataset is in LONG format with each record representing a unique teacher by student by year by content area combination.

Usage

`data(sgpData_INSTRUCTOR_NUMBER)`

Format

A data frame of student level observations for five years and two content areas for the following variables.

ID Unique Student Identification Number

CONTENT_AREA Content area for student/teacher record (Reading or Mathematics)

YEAR Year for student/teacher record

INSTRUCTOR_NUMBER Unique instructor number identifier

INSTRUCTOR_LAST_NAME Instructor last name

INSTRUCTOR_FIRST_NAME Instructor first name

INSTRUCTOR_WEIGHT Proportional weight associated with student/teacher record

INSTRUCTOR_ENROLLMENT_STATUS Indicator of full enrollment status of student with teacher

Source

Anonymized student/teacher lookup table in LONG format

sgpData_LONG

Longitudinal Student Assessment Data in LONG format

Description

A dataset comprising a subset of five years of state assessment reading and mathematics data suitable for student growth percentile and percentile growth projection/trajectory analyses. The dataset is in LONG format with each record representing a unique student, by year by content area combination. The example is used examples and illustration in enclosed documentation to show how SGPs can be operationalized across years with the results being used to produce a variety of high quality visualizations both at the aggregate (e.g., school) and individual level.

Usage

```
data(sgpData_LONG)
```

Format

A data frame of student level observations for five years and two content areas for the following variables.

ID Unique Student Identification Number

LAST_NAME Student last name

FIRST_NAME Student first name

CONTENT_AREA Content area for student observation (Reading or Mathematics)
YEAR Year for student observation
GRADE Grade level of student observation
SCALE_SCORE Student Scale Score
ACHIEVEMENT_LEVEL Achievement level associated with student scale score
GENDER Student gender
ETHNICITY Student ethnicity
FREE_REDUCED_LUNCH_STATUS Student free/reduced lunch status
ELL_STATUS Student English Language Learner status
IEP_STATUS Student Individual Education Plan status
GIFTED_AND_TALENTED_PROGRAM_STATUS Student Gifted and Talented Program status
SCHOOL_NUMBER School number associated with student record
SCHOOL_NAME School name associated with school number and student record
EMH_LEVEL Elementary, Middle, High school indicator for school attended
DISTRICT_NUMBER District number associated with student record
DISTRICT_NAME District name associated with school number and student record
SCHOOL_ENROLLMENT_STATUS Indicator of full academic year student enrollment in school
DISTRICT_ENROLLMENT_STATUS Indicator of full academic year student enrollment in school
STATE_ENROLLMENT_STATUS Indicator of full academic year student enrollment in school
VALID_CASE Indicator of whether the case is valid or invalid

Note

All datasets used with `studentGrowthPercentiles` and `studentGrowthProjections` must be specifically formatted as *wide* format files. The first variable/column is the student ID variable. The next set of columns provide the grade of the student across all the years provided in the dataset (possibly missing). The last set of columns provide the scales scores of the student in the respective grades. Operational users of this package are advised to use data formatted similar to the `sgpData_LONG` with the higher level functions `prepareSGP`, `analyzeSGP`, `combineSGP`, `summarizeSGP`

Source

Anonymized student level state assessment data in LONG format
