

# Package ‘majesticR’

January 7, 2019

**Type** Package

**Title** R Interface to Access the 'Majestic' API

**Version** 0.1.1

**Description**

Implements methods for querying backlink data from 'Majestic' using its API (<<https://developer-support.majestic.com/api/>>).

'Majestic' API uses a basic authentication with an API key. This package is used in the ``Do You Need Backlinks for SEO'' tutorial <<https://remibacha.com/en/backlinks-r/>>.

**License** GPL-3

**Encoding** UTF-8

**LazyData** true

**RoxygenNote** 6.1.0

**Imports** utils, jsonlite, urltools

**Suggests** knitr, rmarkdown

**VignetteBuilder** knitr

**NeedsCompilation** no

**Author** Remi Bacha [aut, cre]

**Maintainer** Remi Bacha <[hello@remibacha.com](mailto:hello@remibacha.com)>

**Repository** CRAN

**Date/Publication** 2019-01-07 16:40:33 UTC

## R topics documented:

majestic_all . . . . .	2
majestic_domain . . . . .	2
majestic_url . . . . .	3

<b>Index</b>	<b>4</b>
--------------	----------

---

 majestic\_all

*Majestic All*

---

### Description

This function provides both all backlink data of and URL and its roots domain, including its CitationFlow, TrustFlow, and Root domain.

### Usage

```
majestic_all(url, api_key)
```

### Arguments

url	An URL you'd like to investigate.
api_key	An identification key assigned to a user after subscribing to Majestic that is available via Profile page.

### Value

majestic\_all provides all backlink data of an UR

### Examples

```
## Not run:
url <- "https://dataseolabs.com/fr/"
api_key <- "xxxxxxxxxxxxxxxxxxxxx"
majestic_all(url, api_key)

## End(Not run)
```

---

 majestic\_domain

*Majestic Domain*

---

### Description

This function first extract the root domain from an URL, then provides all backlink data of the domain, including its CitationFlow, TrustFlow, and Root domain.

### Usage

```
majestic_domain(url, api_key)
```

**Arguments**

url	An URL you'd like to investigate the domain data.
api_key	An identification key assigned to a user after subscribing to Majestic that is available via Profile page.

**Value**

majestic\_domain provides all backlink data of an URL

**Examples**

```
## Not run:
url <- "https://dataseolabs.com/en/"
api_key <- "xxxxxxxxxxxxxxxxxxxxx"
majestic_domain(url, api_key)

## End(Not run)
```

---

majestic_url	<i>Majestic URL -</i>
--------------	-----------------------

---

**Description**

This function provides all backlink data of an URL, including its CitationFlow, TrustFlow, and Root domain.

**Usage**

```
majestic_url(url, api_key)
```

**Arguments**

url	An URL you'd like to investigate.
